

CUTTING TOOLS

for rotary drum cutters

ROUND ATTACK PICKS, PICK BOXES, RETAINING CLIPS

For **erkat** rotary drum cutters and cutter wheels

erkat rotary drum cutters work under extremely hard conditions in trenching, demolition, rock excavation and tunnelling, in steel mills as in other unusual applications. This puts very high demands on the cutter drums and cutting tools.

The result of many years experience, with machines working in thousands of applications around the world, can be seen in the type of picks used and their cutting pattern on **erkat** equipment. This unique combination provides maximum productivity with minimum wear, ensuring the economical performance of **erkat** drum cutters even in the hardest conditions. Modern technology and continuous product development are the basics for ensuring the economic benefits of using our drum cutters and cutting tools.

In addition to alternative design cutter drums, we also offer a large variety of pick types even for unusual applications.

In our range of cutter picks, we have paid special attention to the optimum shape, high quality materials and sustainable quality of the production process. This helps you to keep your consumable costs to a minimum.

This catalogue should provide an overview of our standard range of cutter tools, pick boxes and retainer clips, suitable for a wide range of applications.

If you have an extremely unusual application or requirement, don't hesitate to contact us. Our specialists are pleased to provide advice and support in your search for the most suitable cutter tools.

SEVERAL PICKS – “PIECE BY PIECE”

THE OPTIMUM SHAPE

The type of round attack picks and their pattern on the cutter drum determines how effectively rock is cut which requires specialist knowledge and expertise in geology and cutting technology.

It is the pick that breaks portions of rock out during the cutting operation. Due to the range of rock types, their hardness and toughness, a variety of drum design are required to achieve optimum penetration in each type of rock.

For each model of drum cutter, **erkat** offers a range of pick types allowing the best possible solution for each application. For example:

ER 15/90/70/30 (1)

Narrow pick head with small diameter insert, for use in soft rock

ER 17/75/70/30 (2)

Standard pick head with medium diameter insert, for use in soft to medium hard rock

ER 22/75/70/30 (3)

Standard pick head with medium diameter insert, for use in medium to hard rock

ER 25/77/70/30 (4)

Standard pick head with large diameter insert, for use in very hard rock

ER 30/77/70/30 (5)

Standard pick head with large insert cap, for use in soft to medium hard but abrasive rock

ER 19/75/70/30 (6)

Standard pick head with medium diameter insert and additional hard facing, for use in medium to hard abrasive rock

ROAND ATTACK PICKS

The tungsten carbide insert braised into the body of the pick is at the heart of the cutting operation and is subject to extreme stresses due to it coming continuously into contact with the rock.

The pick body, (head and shaft) is made from heat-treated steel and serves as the support for the tungsten carbide insert and also as protection for the pick box. The tungsten carbide insert is extremely wear resistant and tough to withstand impact.

The insert is a sintered material made up of tungsten carbide with a cobalt binder. Depending on application, a variety of carbide grades and shapes are available.

PICK BOXES

Pick boxes welded onto the cutter head determine where and how picks penetrate into the rock. The special attack angle ensures a continuous rotation of the pick creating a self sharpening action for the tungsten carbide insert during the cutting action. The correct angle ensures maximum productivity with minimum wear. Pick boxes are also made from specially heat treated steel and depending on applications, are available with exchangeable wear sleeves.

RETAINING CLIPS

Retaining clips ensure that picks do not fly out of the pick boxes. Various types of retaining clip are available depending on pick type and application area e.g. retaining collars for soft rock or circlip type systems for hard rock applications.

For quick and easy changing of picks, **erkat** offers the **QuickSnap** retaining system, which allows picks to be changed in a matter of seconds. This represents a saving of over 50% in time compared with normal circlip or knock on retainer systems.

Easier and quicker pick changes with **erkat** QuickSnap
